

## **ME 120**

### **Impeller Drawing**

Complete a Solidworks drawing of the water pump impeller. Follow the instructions given during class and in the document from the corresponding lecture.

Each student team should submit 2 files, as shown in the instructions (a SLDPRT file and a STL file) via the D2L dropbox.

To receive full credit, the Solidworks files must be received in the D2L dropbox before deadline (time deadline is posted via the Dropbox in D2L). Parts received after the deadline must use the Late Drop Box. Any drawing submitted after the deadline will have a reduced score.
